NO 03 REPEATER MOVE:

I have had a couple of inquires on the repeater about "is the repeater moving?". There is NO plan to move the repeater. I think some members may have misinterpreted a pink January's Q-card item : ie.440 Experiments Progress etc. These experiments by Jim.xbd and Frank.maz are being conducted to improve the Laconia downtown area coverage for mobiles. Even though the move to Ossipee a year and a half ago increased coverage greatly, (even in Laconia), some improvement in that area can still be made. Seems, especially the lesser performance "on-glass" mobile antennas don't cut it. The idea is to link a remote 03 base to the Bennett Hill location by 440. The 440 part would be just a link, not a user input. Ideally 03 users would not even be aware of such a link. Just talk as usual.

Otherwise the repeater is working fine, even with the extreme cold wx we have been seeing; -10 to -15 degrees.
